Heavy Metals in Dry Film of Paint

On 18th October 2022, Eurofins Product Testing A/S received a sample of a paint with the product name :

SOL-TEX

supplied by

Ivas Industria Vernici Spa

The heavy metals in dry film of paint were tested according to the Italian CAM Edilizia Decree DM 23 Giugno 2022 n. 254, GURI n. 184 del 8 agosto 2022 section 2.5.13 b section. Testing and evaluation were performed according to ISO 17294m:2016 for chromium and selenium and DS 259:2003, SM 3120 ICP-OES for arsenic, cadmium, lead and mercury. (see the test report no. 392-2022-00455609_XN_EN).

Evaluation of heavy metals in dry film of paint result according to Italian CAM:

- Single heavy metal concentrations of cadmium, lead, hexavalent chromium, mercury, arsenic and selenium is below 0.010 % by weight in dry paint on the tested sample.
